

entangled

Quantum Mechanics tells us Everything's entangled.
Every Particle-Wave with every Other.
From the beginning of the Universe,
even if now separated in Time and Space —
Presence.

Complexity Theory agrees about Entanglement.
Whether an atom, a molecule, a cell, an organism, a society...
every System is found in an environment
nested with other Systems.
Every part entangled with the Whole.

Every Person depends on the success of the System for survival.
No one is immune.
Networks that make up the System provide the Agents with essential needs
 water, food, shelter, energy, sanitation...
 healthcare, communication, transportation, information, entertainment...
 governance, arbitration, security...
Everyone is part of a larger Entanglement.

Scientists warn that raising the Global temperature by 2°
will result in devastating irreversible changes
 intense heatwaves will render large regions of Earth uninhabitable
 sea levels will rise
 coral reefs will die off along with massive biodiversity loss
We are a Species too intelligent to let this happen.

People in the top 10% income bracket
who control 85% of the World's Wealth
are wholly entangled with the other 90% of the Human Population
 whose needs can't be met with the remaining 15% of the Wealth.
We are each inescapably entangled —
if we fail at this Pathway's End,
Chaos befalls us all.
