

Open Letter

Earth is too beautiful a Paradise to lose.
Democracy too important a Way of Life to abandon.
The Progress we've made as a Species too valuable to forget.

We've desired Change for a long time —
but where we're headed now is beginning to look like Chaos.

Trump and the Republican Party are showing us what Conservatism looks like.
The Wealthy are not yet waking to their Responsibility for the needs of Others;
People invested with Power are not yet doing all they can to heal the Planet.

If we agree that this is really not the kind of World we want to pass to the Children,
Being Human, we can do something about it.

We can try something different.

Despite their shortcomings or whatever reservations we might have,
the simple and obvious alternative would be to give the Liberals a Chance.
Put the Democrats in charge, see if they could do better.

It wouldn't be difficult to do this.

In a democracy we're able to change our political landscape;
bring our World closer to how our Hearts would like it to be;
we could encourage all who are eligible to vote
no matter how they may have voted in the past,
no matter their Party,
to create a "just for this one time" moment,
turn out and Vote only for Democrats in the November 2026 Midterm Elections.

If the Democrats were to win large enough majorities in both Chambers,
they could exercise their Constitutionally provisioned Congressional Power
bring the Administrative Branch of Government back into alignment,
and so much more.

Should they fail our trust, however; in two short years we vote again.

As long as enough Republicans prove loyal to their oath to defend the Constitution;
and the Supreme Court upholds our Right to Vote as Citizens of a true democracy;
the majority Rules —

which makes error correction, adaptation and evolution possible.

The Climate Crisis,
On-going Wars with a backdrop of Nuclear Armaments,
Gross Economic Inequity and Global Migration,
we have reached the Self-as-Separate Pathway's End.
2026 could mark a tipping point.
A small change can lead to a Phase Transition.
